Combustion Wire Gun - 2mm Hardware

Many of our customers are using 2mm wire in their Electric Arc wire systems. The same customers also employ hand held combustion wire guns for mobile, touch up or small part coatings.

These users end up having to purchase material in different diameters to use in the combustion systems because 2mm hardware isn't available for most combustion torches.

Our customers end up having to pay a premium for small volume coils and maintain additional inventory even when they already had hundreds or thousands of pounds of wire in house.

Plasma Powder's solution was to develop 2mm wire hardware for our Combustion Wire guns. These parts also fit combustion wire guns from other manufacturers. Please call for a compatibility list. We offer these for acetylene, propane or natural gas fuels.

We Build Relationships with Our Customers

At Plasma Powders, Quality and Service are our first priority. Our CRM and Technical staff will take the time to make sure all of your needs are met or exceeded and our expert technicians will help to diagnose, repair or engineer an integrated solution for your thermal spray application.

Plasma Powders supplies Systems, Parts, Powders, Wire and Complete turn-key solutions including custom made precision handling equipment, robotics, dust collection and training at our facility or yours. We are known around the world for our 1/8" 80/20 NiAl BONDRITE®
